

COFSE WIX SITE DOCUMENTATION

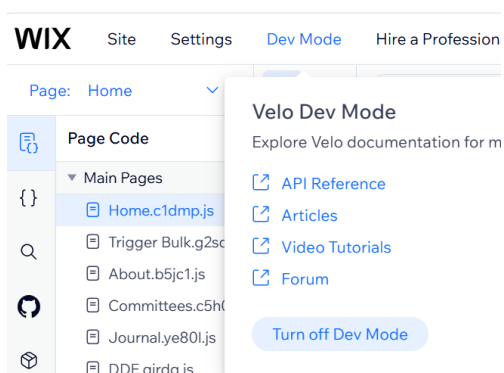

Overview:

I used a combination of the Wix Editor and Wix Velo (allows custom code like JavaScript and CSS) to create the site. I used Wix Editor to create the pages, create and place different elements (text, images, application inputs, buttons), and add fields to CMS (Wix databases). Wix Editor also allows you to preview to site to see what it will look like and behave like if it was live. I then primarily used Wix Velo to style the elements by writing CSS to change font size, font, font color, text alignment, text style, and add links. **Changes to styling in Wix Velo will override what the elements look like in the Wix Editor.** I also used Wix Velo to create backend files to handle saving and emailing application memberships to the appropriate administrators and automatically creating members if they were approved. **The backend files should rarely be modified, only when adding/removing application fields and changing who should receive the email. I will later highlight exactly where to make the modifications.**

How to Access Wix Velo:

Default Way (Recommended):

Once in the Wix Editor, click Dev Mode, and then Turn on Dev Mode. You will then see the code written for each page, and you can add or modify the code directly on the page. Once you modify and click Save, Previewing or Publishing the site will behave according to the changes.

Connect to GitHub Repository:

Instead of writing code directly in Dev Mode, you can connect site and code to a GitHub repository. **Once you connect to a GitHub repository, you will have to write code locally (Visual Studio Code) and the code in the Dev Mode view will become read-only.**

To connect, click the GitHub icon on the left side of the Wix Editor once in Dev Mode:

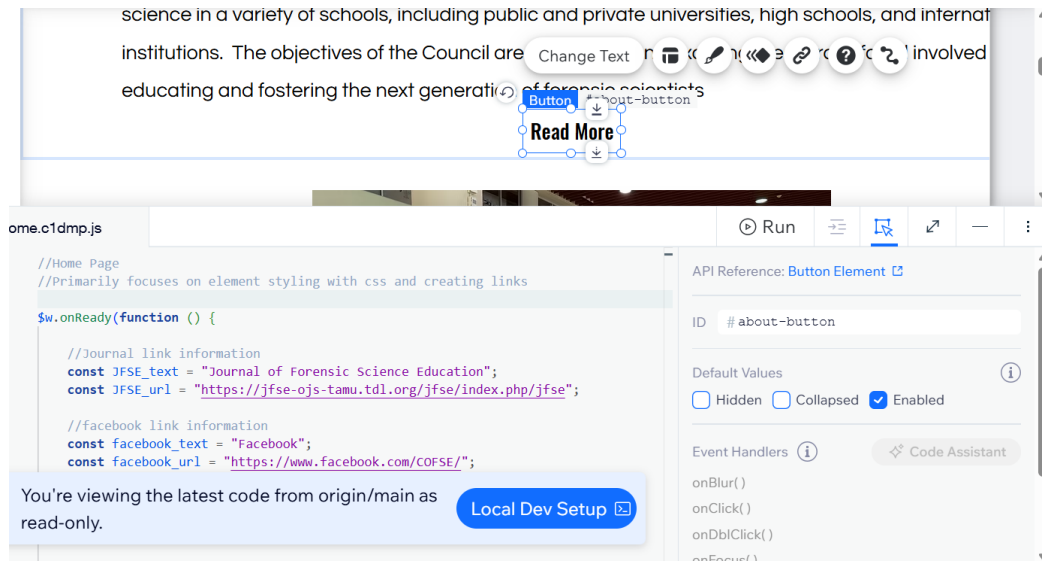

Then follow the instructions to connect the site to your GitHub repository. I then recommend downloading GitHub Desktop and connecting it to your GitHub repository. Then when you click “Open in VS Code” in GitHub Desktop, you should see all code for each page. First, make sure Node.js is installed on your machine. Then, you will most likely need to enter “npm install -g @wix/cli” in the VS Code terminal which will link the Editor to your code in VS Code. Then every time you want to modify code in VS Code, enter in the terminal “Wix Dev”. Once you make changes to the code files and save by (ctrl + s), the changes will automatically be added to the read-only code in Dev Mode. Also make sure to click save in Wix Editor every time you make any change. When you are done making changes to the code, click “ctrl + c” in the terminal to end to connection. To publish the site, you would enter “Wix Publish” in the terminal and choose “local code” when appropriate.

How to use Velo:

When creating new elements, you can style them either by Wix Editor or by Wix Velo. When modifying the styles of elements already styled via Wix Velo, you must change the Velo (or delete the element and recreate it using only the Editor if preferred).

Wix Velo relies on element IDs to know which element it is accessing. To modify or access the ID of an element, go to Dev Mode in the Editor, click on the element you want to create an ID for, and then look for the ID section on the bottom right:

When choosing an ID, make it a one or two word description, and avoid space between words.

You will then access the element for the specific ID with:

`$w("#welcome")`, where #welcome is an ID

As you will most likely work on styling new elements, follow this format:

```
const welcome = $w("#welcome").text;
$w("#welcome").html = `<p style="text-align: center;font-size: 42px;font-family: 'Oswald', sans-serif;">${welcome}</p>`;
```

The first line creates a variable containing the text that was inputted to the element using Wix Editor. The second line styles the text inside a <p> html element by aligning the text, changing font size, and changing the font style.

If you want to use Velo to turn the text of an element to a link, follow this format:

```
//OVERRIDES THE STYLING ON EDIT PAGE
$w("#linkedIn-Link").html = `<p style="text-align: center; font-size:16px;">
  <a href="${linkedIn_url}" target="_blank" style="color: black; text-decoration: underline; font-weight: bold">
    ${linkedIn_text}
  </a>
</p>`;
```

The styling is done in the <p> tag and the link is created in the href part of the <a> tag, where href=(url link).

To create a button that links to another page on the site, follow this format:

```
//Read more button that links to About p
$w("#about-button").link = "/about";
$w("#about-button").target = "_self";
```

Where the name of the Wix page follows the “/”. If the page is two words, the page link will be /first-second.

Wix Velo Pages:

Each velo page contains comments explaining exactly what the code does. A brief description of each is shown below:

About: Styles all existing headers and sub headers, styles the Executive Board snippets, creates buttons that link to the Executive Board bio pages, and creates links for Bylaws and email.

Account Settings: Created by Members Wix app that allows members to change their information and login. **No changes should be made.**

Additional Resources: Creates links to pdf for each resource

Admin Review: Displays the submission input details, creates an approval and decline button, and calls backend code to automatically create members for approved users. **Only thing that should be modified is if the list of fields displayed in form is modified. I will highlight where to modify later in the document.**

Annual Meetings: Creates links to pdf for each meeting

Committees: Styles headers and create links for each Committee sub page

DDE Committee: Styles header and sub headers and creates links for each email

DDE: Styles header and sub headers and creates links for all the different resources

Higher Education: Styles header and sub headers and creates links for each email

Home: Styles header and sub headers and creates links for all the different resources. Also creates a button to link to About Us page

Immediate Past President: Styles header

International Chapters: Styles header and creates link for every email

Journal: Style header and sub headers and creates link for the resources

K-12: Styles header and sub headers and creates links for each email

Links: Currently blank and hidden as it is not being used

Master Page: Created as default and cannot be deleted. Not being modified. **Do not modify**

Member Directory: Currently blank and hidden as it is not being used

Member Resources: Style header and create links to the different member resources pages

Membership and Outreach: Styles header and sub headers and creates links for each email

Membership Application: Handles the creation of the COFSE membership form. **Only thing that should be modified is the list of fields displayed in the form. I will highlight where to modify later in the document.**

Membership Dues: Creates links for the payment options

Membership Form: Handles the creation of the DDE membership form. **Only thing that should be modified is the list of fields displayed in the form. I will highlight where to modify later in the document.**

Membership: Styles header and sub headers

Nomination Committee: Styles header and sub headers and creates links for each email

Presentations: Creates links to pdf for each presentation

President Elect: Styles header

President: Styles header

Privacy Policy: Created as default and cannot be deleted. Not being modified. **Do not modify**

Refund Policy: Created as default and cannot be deleted. Not being modified. **Do not modify**

Research Committee: Styles header and sub headers and creates links for each email

Secretary: Styles header

Treasurer: Styles header

Trigger Bulk: Creates a page and calls backend code to convert imported members of COFSE CMS to a contact. **Should not need to be used again and should not be modified**

Workshops: Creates links to pdf for each workshop

cofseEmail: Backend code that saves COFSE application submissions to CMS, sends an email to the COFSE administrator containing the link to review the application, and provides a function to create contacts for each imported member (should not be used again). **The only thing that should be modified is the link of the review site when the domain is updated and the email address that will receive the email. I will highlight where to make these changes later.**

emailService: Backend code that saves DDE application submissions to CMS, sends an email to the DDE administrator containing the link to review the application. **The only thing that should be modified is the email address that will receive the email. I will highlight where to make these changes later.**

How to Add Field to Application:

1. Create input element of desired type in Wix Editor and place where you want
 - a. Click settings to change if it is required or not
2. Create text element to describe the input and place next to element
3. Go to Wix Dashboard, click CMS, and choose appropriate CMS (cofseApplications or ddeSubmissions)
 - a. Click add field, add the field you want to add and make it appropriate type
4. Back in the Editor, go to Dev Mode
 - a. Click databases and choose correct database
 - b. Find the field you added and click the “copy ID” button
5. Then go to the application page in Dev Mode, click on the input you added to the page, and paste the ID in the ID section and save
6. **If addition is in the COFSE application, go to the “Membership Application” page in Dev Mode**
 - a. Add the ID of the input (exactly as pasted) in the order that it is on the page to this line:

```
11 //MUST USE SAME NAME AS ID FOR THE INPUT CREATED IN WIX VELO
12 const allInputs = ["#email", "#firstName", "#lastName", "#address", "#phone", "#jobTitle", "#employer", "#superv
13
```

7. Then go to “Admin Review” page in Dev Mode

- a. Add the ID of the input (without the # in front) in the order you want it displayed to this line:

```
if (data) {  
  const orderedKeys = [  
    "email",  
    "firstName",  
    "lastName",  
    "address",  
    "phone",  
    "jobTitle",  
    "employer",  
    "supervisor",  
    "supervisorEmail",  
    "employmentLink",  
    "aafs",  
    "memberType",  
    "engagement",  
    "experience",  
    "facebook",  
    "twitter",  
    "linkedin",  
    "website"  
  ]  
}
```

8. If addition is in the DDE application, go to the “Membership Form” page in Dev Mode

- a. Add the ID of the input (exactly as pasted) in the order that it is on the page to this line:

```
43 $w( #submitButton ).onClick(async () => {  
44   //ADD OR SUBTRACT WITH SAME NAME CREATED IN WIX VELO IF FIELD IS ADDED TO FORM AND DATABASE  
45   const allInputs = ["#institution", "#streetAddress", "#streetAddress2", "#city", "#state", "#postal", "#country"]  
46 }
```

9. Nothing needs to be changed on any other files if the change is to DDE application

How to Remove Field to Application:

1. Delete the input element on the application form of the page
2. Delete the text element next to the deleted input
3. Go to Wix Dashboard, click CMS, and choose appropriate CMS (cofseApplications or ddeSubmissions)
 - a. Find the field you want removed and click delete
4. **If removal is in the COFSE application, go to the “Membership Application” page in Dev Mode**

- a. Remove the ID of the input you want to remove on this line:

```
11 //MUST USE SAME NAME AS ID FOR THE INPUT CREATED IN WIX VELO  
12 const allInputs = ["#email", "#firstName", "#lastName", "#address", "#phone", "#jobTitle", "#employer", "#supervisor"]  
13
```

5. Then go to “Admin Review” page in Dev Mode

- a. Remove the ID of the input you want to remove in this line

```

    if (data) {
      const orderedKeys = [
        "email",
        "firstName",
        "lastName",
        "address",
        "phone",
        "jobTitle",
        "employer",
        "supervisor",
        "supervisorEmail",
        "employmentLink",
        "aafs",
        "memberType",
        "engagement",
        "experience",
        "facebook",
        "twitter",
        "linkedIn",
        "website"
      ];
    }
  }
}

```

6. If removal is in the DDE application, go to the “Membership Form” page in Dev Mode

- a. Remove the ID of the input you want to remove in this line:

```

43 $w( #submitButton ).onClick(async () => {
44   //ADD OR SUBTRACT WITH SAME NAME CREATED IN WIX VELO IF FIELD IS ADDED TO FORM AND DATABASE
45   const allInputs = ["#institution", "#streetAddress", "#streetAddress2", "#city", "#state", "#postal", "#country"];
46 }

```

7. Nothing needs to be changed on any other files if the change is to DDE application

How to change where the emails get sent:

To change the recipient of the DDE submission:

1. Go to emailService in Dev Mode and modify this line to replace the email with the new recipient (you can add more than one by putting a comma in between):

```

20 //target email will be changed to COFSE email and DDE email
21 //currently mine for testing purposes
22 const targetEmails = ["nardozzor@duq.edu"];
23

```

To change the recipient of the COFSE submission:

1. Go to cofseEmail in Dev Mode and modify this line to replace the email with the new recipient (you can add more than one by putting a comma in between):

```

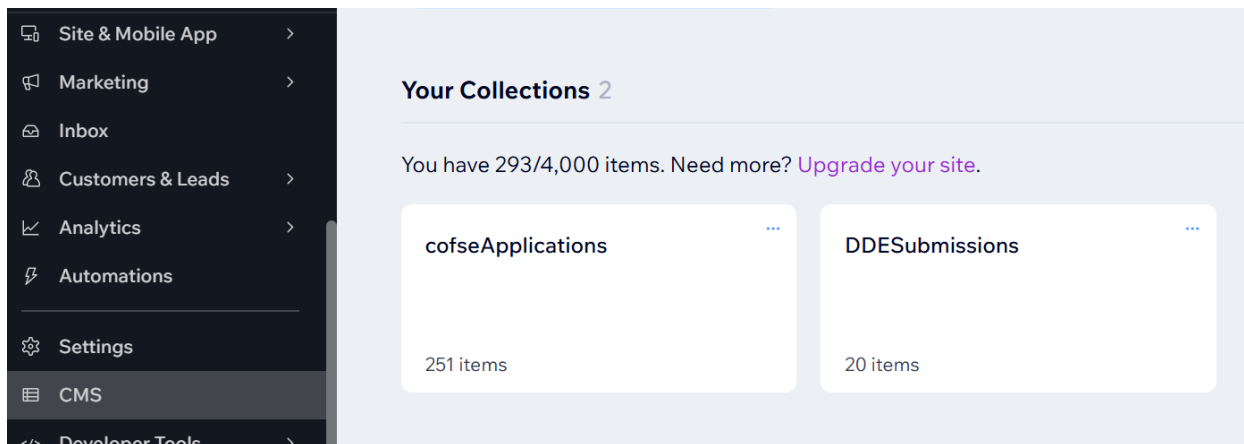

43 }
44
45 const targetEmails = ["nardozzor@duq.edu"];
46

```

Wix Dashboard Tools:

CMS:

CMS contains the Wix databases that store the submissions of both the DDE and COFSE submissions. There are currently two for the COFSE site, cofseApplications and ddeSubmissions. Each database will contain each application submitted with all the inputted fields, as well as an option to delete records from the database.

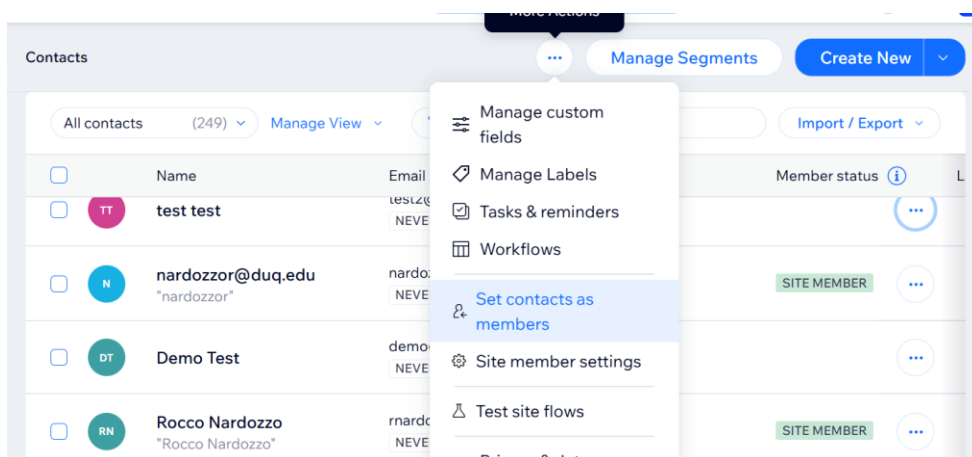

Contacts:

The Contact List contains all the users who have submitted a COFSE application form (no matter what the approval status), as well as the pre-existing members imported in. Each contact consists of their name and their email address. The contact list also highlights which contacts are site members.

To navigate to the Contact List, search Contacts in the search bar of the dashboard.

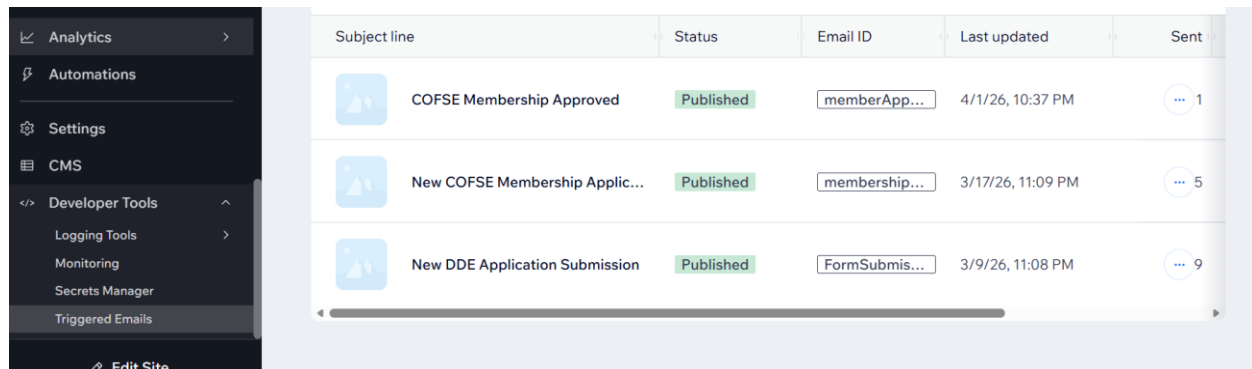

To invite contacts to become members, click more actions, and then click “Set Contacts as Members”

Triggered Emails:

Triggered emails are emails that are designed in the Wix Dashboard that get sent as an email based on the written code. There are currently three: COFSE Membership Approved (sent to user when they become member), New COFSE Membership Application (sent to admin with link to review application), and New DDE Application Submission (sent to admin with submission details).

You can navigate to these by clicking “Triggered Emails” under Developer Tools on the left bar.

Subject line	Status	Email ID	Last updated	Sent
COFSE Membership Approved	Published	memberApp...	4/1/26, 10:37 PM	1
New COFSE Membership Applic...	Published	membership...	3/17/26, 11:09 PM	5
New DDE Application Submission	Published	FormSubmis...	3/9/26, 11:08 PM	9

By clicking on one of the triggered emails, you can change the design.

If you were to create a new one, you must write code to send it to the designated user formatted like:

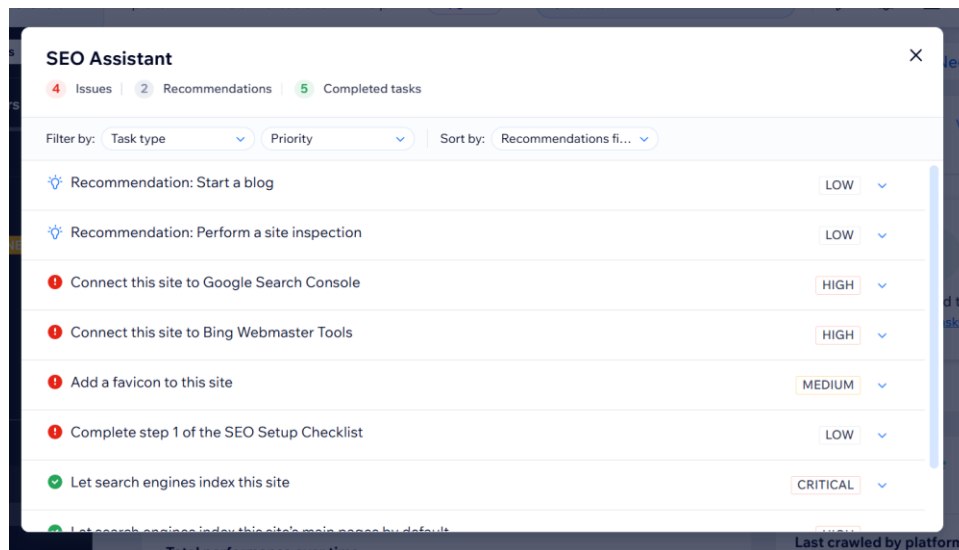

```
return triggeredEmails.emailContact('membershipReview', contactId, {  
  variables: { formData: bodyText,  
    reviewLink: reviewLink  
  }  
}, { "suppressAuth": true });  
  
} catch (innerError) {  
  console.error(`Failed to process email for ${email}:`, innerError);  
  throw innerError;  
}
```

Where ‘membershipReview’ would be replaced with the email ID of the new triggered email, contactId is the contact in the list’s ID number that it is being sent to, and the variables will change depending on the variables created in the triggered email.

Recommended Next Action:

The site is now live on the proper domain. However, there are a few things that can be done on the Wix Dashboard to make the site show up more often in search bars.

Once you are in Wix Dashboard, search SEO and GEO in the search bar. Then, click on “view tasks” under the Issues box.

I recommend focusing on the two “high priority” tasks, “Connecting this site to Google Search Console” and “Connect this site to Bing Webmaster Tools”.

By following the directions provided by Wix when you click on these tasks, you will be able to ensure the site shows up more often on different search bars.

COFSE Members:

While I have imported 240 COFSE members to become contacts on the new site, you will still have to invite them to become members as shown above. Now that the site is live on the new domain, you can invite them whenever you are ready.

However, there were many members that did not have an email in the members list. As a result, I could not make them contacts, and they will have to reapply on the new site.

Once you start receiving new applications (either from current members or new members), you can approve in two ways:

1. Click the link in the email sent to you when a user submits a form. From the link, clicking approve will automatically make them a member
2. You can look directly in the CMS to see the inputs of all the different users. Once you have examined the different submissions, you can invite them to become members from the Contact List.

Last Note:

When adding future new content, you can almost always use strictly the Wix Editor. You can use the Wix Editor to create, place, and style new elements. **The only time you will fully need to change code is when adding/removing fields from applications, changing who receives application emails, and if you would ever create a new triggered email.**
